Trane Showcases Services and Controls Capabilities at ACREX-2012

Solutions to help achieve superior energy efficiency and sustainability

Bangalore, India (Feb. 23, 2012) — To respond to customer needs for energy efficiency and sustainability, Trane, a leading global provider of indoor comfort systems and solutions and a brand of Ingersoll Rand, showcased its chiller rental, adiabatic cooling services and controls capabilities at ACREX 2012, held in Bangalore, from 23-25 Feb. 2012.

In a building's lifecycle, temporary cooling needs can arise due to a planned event or emergency. Not meeting those cooling needs, even partially, can generate substantial costs and stress for managers responsible for a facility. At ACREX, Trane displayed a rental chiller which is specially designed to provide an immediate solution, short or long term, tailored to the customer's requirement.

Similarly, in an effort to reach out to building owners and facility managers, Trane showcased its new adiabatic cooling capability that can improve system efficiency and reliability by decreasing the temperature of the air entering the coil.

Also on display was the Tracer™ range of controllers which offer a complete approach to building automation, with the freedom to easily integrate, operate and maintain heating, ventilation and air conditioning (HVAC) systems at any level. The open protocol, web-based building control system is especially easy to use and allows for customization and high performance.

"Our services and controls capabilities can be applied in a wide variety of facilities, including healthcare, industrial, lodging, retail and educational buildings and the ACREX exhibition provided us an ideal platform to share our expertise with our customers," said Rajesh Sikka, Trane India business leader.
